

REGISTRATION FORM

Name _____

Address _____

Tel. _____

Email _____

I wish to register for the course at a cost of £850 including course material and workshop lunches.

I enclose a cheque for £850

Please invoice me at the above address

Please send me information on local hotels

Disclaimer

All materials and information supplied during and associated with this course are intended purely for instructional purposes. Whilst every effort is taken to ensure that materials provided are accurate and suitable for training purposes, ASRANet Ltd accepts no responsibility for their accuracy or utility.

I accept the above.

Signature _____

Date _____

The completed form should be sent to:
ASRANet Ltd.
5 St Vincent Place, Glasgow, G1 2DH

Cost

The registration fee of the workshop will be £850 which includes course notes and lunches. You should make your own arrangements for accommodation.

Payment

ASRANet Ltd. accepts payments by cheque, cash and bank transfer. Please contact for further details.

Venue

Hotel and Restaurant Campanile
Kleveringweg 532616LZ
Ypenburgse Poort
Delft
Netherlands

Note

Please do not make your travel arrangements until you receive an Invoice from us.

Offshore Floating Structures Design

This course meets the requirement for Continuing Professional Development (CPD) of the Royal Institution of Naval Architects (RINA)

3-5 July 2017

ISO 9001:2008 certified company

(A maritime company for courses, conferences and research)

Delft, Netherlands

About the Course

This module will deal with both the loading of offshore floating structures. There will be twelve lectures in total, each of 90 minutes duration. The initial lectures will cover hydrodynamic loading and will include environmental loads and motions, buoyancy and stability, catenary and tension-leg mooring, Dynamic Positioning systems and the design of semi-submersible structures. The lectures will also cover the structural concept of floating structures in terms of function and safety. Stiff-ened plates which consist a large parts of floating structures will be dealt in detail, including structural response of stiffened plate and standards and guidelines. The structural response of stiffened shells will be dealt in detail including structural reliability. An introduction to structural reliability. Finally, the structural design of tanker conversions to FPSOs will be dealt with.

PROGRAMME

Monday 5th July 2017

08.30 - 09.00	Delegate Registration
09.00 – 10.30	Lecture 1: Environmental Loads <i>Dr Omar Khattab</i>
10.30 - 10.45	<i>Break</i>
10.45 - 12.15	Lecture 2: Buoyancy and Stability <i>Dr Omar Khattab</i>
12.15 - 13.30	<i>Lunch</i>
13.30 - 15.00	Lecture 3: Catenary Mooring System <i>Dr Omar Khattab</i>
15.00 – 15.30	<i>Break</i>
15.30 - 17.00	Lecture 4: Tension-Leg Mooring System <i>Dr Omar Khattab</i>

Tuesday 4th July 2017

08.30 - 09.00	Delegate Registration
09.00 – 10.30	Lecture 5: Semi-submersible Design I <i>Dr Omar Khattab</i>
10.30 - 10.45	<i>Break</i>
10.45 - 12.15	Lecture 6: Semi-submersible Design II <i>Dr Omar Khattab</i>

12.15 - 13.30	<i>Lunch</i>
13.30 - 15.00	Lecture 7: Structural Concept <i>Prof Purnendu Das</i>
15.00 – 15.30	<i>Break</i>
15.30 - 17.00	Lecture 8: Structural Response I <i>Prof Purnendu Das</i>

Wednesday 5th July 2017

08.30 - 09.00	Delegate Registration
09.00 – 10.30	Lecture 9: Structural Response II <i>Prof Purnendu Das</i>
10.30 - 10.45	<i>Break</i>
10.45 - 12.15	Lecture 10: Reliability and Safety Engineering <i>Prof Purnendu Das</i>
12.15 - 13.30	<i>Lunch</i>
13.30 - 15.00	Lecture 11: Tanker Based FPSOs <i>Prof Purnendu Das</i>
15.00 – 15.30	<i>Break</i>
15.30 - 17.00	Lecture 12: Tutorials on Stiffened Shells and Hull Girders <i>Prof Purnendu Das</i>

CV'S OF LECTURERS:

Professor Purnendu Das

Prof Purnendu Das. BE, ME, PhD, C.Eng, C.MarEng, FRINA, FIStructE, FIMarEST has been the Director of 'ASRANet Ltd' (an ISO 9001-2008 certified company) since February 2006. He retired as a Professor of Marine Structures in the Department of Naval Architecture & Marine Engineering at the University of Strathclyde, UK in September 2011. Past EU projects were MARSTRUCT (a network of excellence on Marine Structure) and SHIPDISMANTL (a cost effective and environmentally friendly dismantling of ship structures). Past industrial projects included work from the UK Health and Safety Executive (HSE), MoD UK, Subsea-7 UK, Shell, Woodgroup and US Navies etc. He was the principal investigator of many EPSRC projects. Before joining the University of Glasgow in 1991 he worked with British Maritime Technology as Principal Structural Engineer (1984-91). He is the author of more than 250 publications, including contract reports and more than 60 journal papers and is a member of the editorial boards of the 'Journal of Marine Structures', 'Journal of Ocean and Ship Technology' and 'Journal of Ocean and Climate System' and the Journal of Ship Mechanics amongst others. His areas of research include limit state design and analysis & reliability analysis of ship & offshore structures. Purnendu Das has wide ranging industrial and academic contacts and has advised and supervised 20 PhD students, to his credit. Details of visits and collaborations include his various sabbatical study periods spent at University of California, Berkeley, USA (July – September 1996), at Lloyd's Register of Shipping (August 1997), Kockums Ltd (July 1998) and spent some time at Instituto Superior Técnico (IST), Lisbon (July 2000). He is running about 20 CPD courses which are attracting many people from different industries. These courses are on 'Fatigue & Fracture Analysis', 'Ships at Sea', 'Advanced Analysis and Design of Offshore Structures', 'Offshore Floating System Design', 'Structural Response under Fire and Blast Loading' and 'Design of Pipelines and Risers' amongst others. He was a member of ISSC (International Ship and Offshore Structure Congress) for the periods of 1991-97 and 2003-

2006. He was a member of the OMAE (Offshore Mechanics and Arctic Engineering) Organising Committee on 'Safety and Reliability'. He is running about 15 bi-annual international conferences on various themes like Risk, Reliability, Advanced Analysis & Design of Engineering Structures, including marine structures. He was a member of the "Research Committee" of Structural Engineers (IStructE) during 2012-2015. He was a visiting Professor at IST Surabaya, Indonesia from July 2015 for one year. He is now a visiting professor at the Wuhan University of Technology, China from July 2016.

Dr Omar Khattab

Dr Omar Khattab BSc, MSc, PhD, CEng, FRINA,MSANJ has been an independent consultant since 2007 working for various clients including Brooks Bell Jarret Kierman, Safety at Sea Ltd., Milford Haven Port Authority, SvitzerMarine Ltd., Port of Belfast, Lloyds Register EMEA, Clydeport Operation Ltd. and SACH Solicitors amongst others. Prior to becoming an independent consultant, Dr. Khattab was a lecturer at Alexandria University, Egypt, where he gained his undergraduate degree, for 5years. He obtained his MSc degree in Hydrodynamics from Alexandria University and his PhD from Japan in 1979. He then spent 5 years with the British Ship Research Association (BSRA) as Principal Research Officer at the Naval Architecture Department. During 1988-1993, Dr. Khattab worked in Senior and Management positions at BMT in the Ship Performance Department, the Fluid Dynamics Group and the Hydrodynamic Services at BMT CORTEC Ltd. After this spell at BMT, he returned to lecturing at Southampton Institute where he began as Sen-ior lecturer for 2 years and was quickly promoted to Head of Maritime Technology. Dr. Khattab then moved to Brookes Bell Jarret Kirman in 2000 be-fore beginning work as R & D Manager at Safety at Sea Ltd where he stayed until he began consultancy work. Dr. Khattab is a Fellow of Royal Institute of Naval Architects, a member of Japan Society of Naval Architects as well as a member of Kansai Society of Naval Architects. His areas of expertise include Ship Grounding and Collision, Hull Form Design, Fluid Mechanics, Ship Construction and Ship hydrodynamics amongst many others. His Con-

sultancy work has included the Investigation of handling behaviour of new generation of Cruise Liners in Miami Harbour and the Design of berthing Jetty for Svitzer tugs in Milford Haven to name but a few.

Content of the lectures:

Lecture 1: Environmental Loads

Wave load; Linear wave theory; Basic assumptions; Governing equations; Solution of linear wave; Wave energy (Potential and kinetic); Kinematics of water particles; Particles velocity and accelerations; Statistical description of sea waves; Idealised wave spectral families: JONSWAP, Bretschneider (ISSC), Pierson Moskowitz spectra; Vortex shedding induced loads; Wave load on large bodies "Diffraction theory"; Wind loads; Current loads.

Lecture 2: Buoyancy and Stability

Flotation Principle of Archimedes; Centre of buoyancy; Static equilibrium; Sinkage, trim, combined heel and trim. Intact stability; Transverse stability; Longitudinal stability effect of free liquids and special cargoes; Curves of static stability; Influence of hull form on ship stability; Factors affecting transverse stability; Dynamical stability. Flooding and damage stability; Damage stability calculations; Floodable length curves. Stability standards; Intact stability; Subdivision and damage stability.

Lecture 3: Catenary Mooring System

Statics of mooring lines; Heavy and short cable (catenary); Naturally buoyant cables; All forces considered-Mooring with elasticity; Two dimensional mass-spring system; Statics of multiple leg mooring system; Method of imaginary reaction; Load excursion static equilibrium; Cable equilibrium in three dimensional. Dynamics of mooring lines; Significance of line dynamics; Mooring line as continuous medium; Cable wave equation; Solution of wave equation; Mooring line as mass spring system; Equation of restoring force; Damping force-exciting force.

Lecture 4: Tension-Leg Mooring System

Dynamics of moored structure; Dynamic load and response analysis; Motion characteristics; Stiffness effect on wave frequency motions; Shallow water effect; Slow drift due to wind and waves; Damping of slowly varying

Response; Transient analysis. Tension leg platforms advantage and limitations; Tether system design; Functional requirements; Configurations; Tether make-ups; Single tether analysis; Hydrodynamic loading; Modal analysis; Functional Requirements.

Lecture 5: Semi-submersible Design-I

Design procedure; Design Regulations; Conceptual design criterion; General arrangements; Gravity load-Icing load; Steady environment forces; Wind, current and waves; Resistance and propulsion; Hydrodynamic forces; Operational loading; Wave Loading; Drag and Diffraction forces; Stability requirements; Intact, Subdivision and damage stability.

Lecture 6: Semi-submersible Design II

Seakeeping motions; Hydrodynamic response criteria; Calculation procedure of the seakeeping performance; General strength and structure design; Mooring system; Station keeping; Spread mooring; Method of Analysis; Environment data; Wind, wave, current; Water depth; Soil and sea floor conditions; Atmospheric icing; Marine growth; Basic considerations of environmental load. Dynamic positioning; Wind forces and moment; Mean wave drift forces and moment; Capability plot of DP system.

Lecture 7: Structural Concept

Design Considerations; Operation, Fabrication and Installation; Function and Safety; Economic and Time Constraints Working Stress Design (WSD),

Load Resistance Factor Design (LRFD); Various Limit States; Operation and Fabrication; Economics of Constructional Aspects.

Lecture 8: Structural Response I

Standards and guidelines; Stiffened plated structure Buckling & post buckling of unstiffened plates, Ultimate strength of stiffened plate, combined loading under axial & lateral load, Design codes API RP 2V, DNV- RPC201, Example problems.

Lecture 9: Structural Response II

Standards and guidelines; Stiffened shells; Elastic and inelastic buckling of unstiffened & stiffened shells under axial, hydrostatic & combined loading; Design codes API RP 2U, DNV- RP-C202; Example Problems

Lecture 11: Tanker Based FPSOs

Process of offshore oil and gas developments, Different type of Floating Off-shore Structures, FPSO & History of FPSO Installations, Pros & Cons, Usage and functions, Mooring the FPSO, field layout effects, offloading, Operating Environment, Mobility, Layout and General arrangement, Tank conversion, Longitudinal Strength characteristics, Tank design and arrangement, Design principles, Limit states, probability safety factor.

Lecture 12: Tutorials on Stiffened Shells and Hull Girders

Examples based on Elastic and inelastic buckling of unstiffened & stiffened shells under axial, hydrostatic & combined loading following DNV code. Examples on Hull Girder Strength will also be dealt with.
